Digital Assets Exchange Systems

Our exchange systems are built according to user preferences and customized by region to provide customers a seamless user experience. We are the top choice for over 450 global cryptocurrency exchanges.

Complete Trading System

- Spot and Derivatives trading systems
- ETF trading system
- Fiat On-Ramp (Deposits and Withdrawals)
- NFT trading system
- Complete suite of trading functions

Multiple Operational Tools

- Broker APIs for high volume user onboarding
- Reward mechanisms for new users
- Native points and crypto rewards systems
- Mortgage lending and hedging to minimize capital turnover
- Financial management tools for customer stickiness

Flexible Deployment and Integration

Choose between plug-and-play SaaS deployment or tailor-make your product with fully privatized white label.

SaaS deployment

allows clients access to pre-built cloud systems to minimize operational and personnel costs.

Fully privatized deployment

includes the delivery of source code and clients will have more autonomy to carry out further development in-house.

Competitive Advantage

ChainUp's underlying architecture, trade-matching engine, liquidity, depth, and customizability are strengths that set us apart from the majority of trading systems available today.

Top-Notch Security

Our comprehensive risk management strategies and state-of-the-art security systems have served and protected company internal systems, and protected over 60 million end users ensuring the integrity of over USD \$365 billion in digital transactions.

Top Liquidity

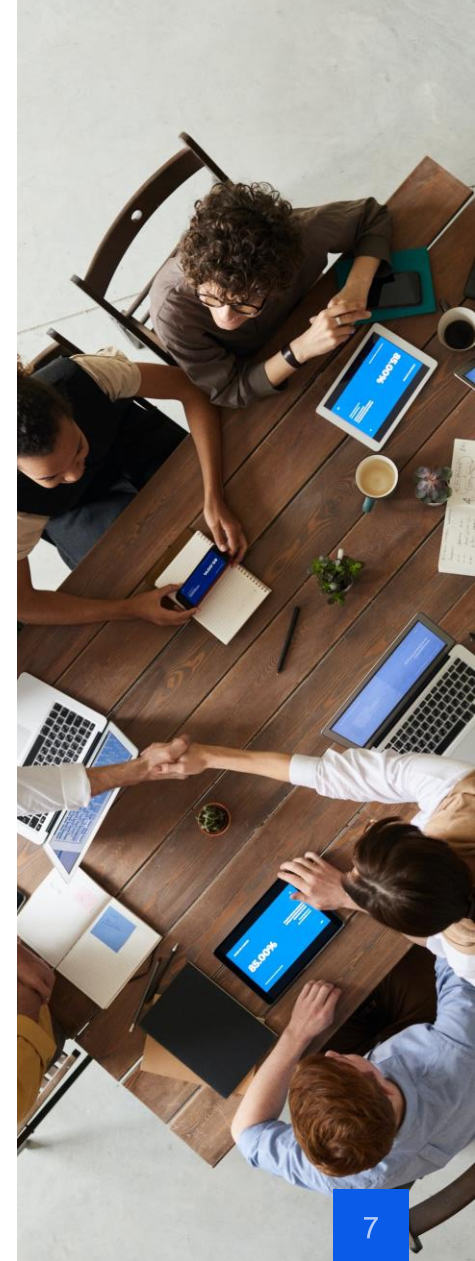

With mass volumes of liquidity aggregation, we provide the world's largest cryptocurrency liquidity pool with volume quality comparable to the world's top crypto exchanges.

Flexible Autonomy

Integrated automatic currency loading with audit, independent secondary development and access to open platform sourcing, multiple international template customizations, and multiple market making strategies for different target markets.

Global Compatibility

We offer a variety of international language versions, customer service, and fund support such as various OTC fiat on-ramps, stablecoins, credit card compatibility, currencies, digital asset custody, and compliant deposit and withdrawals.

Digital Assets Exchange Systems

Our exchange systems are built according to user preferences and customized by region to provide customers a seamless user experience. We are the top choice for over 450 global cryptocurrency exchanges.

SaaS deployment

allows clients access to pre-built cloud systems to minimize operational and personnel costs.

Fully privatized deployment

includes the delivery of source code and clients will have more autonomy to carry out further development in-house.

NFT Trading System

- Instant plug-and-play integration
- Both centralized and decentralized options
- Easily customizable configurations for various business models
- Comprehensive features to buy, trade, and store digital collectibles, artworks, or other assets

Blind Boxes

Allows blind box functionality where users can open and purchase gifts and rewards and receive randomized digital assets.

Multiple Wallets

Provides centralized or decentralized wallet builds. When the system detects a third-party decentralized wallet, it can automatically identify the chain and seamlessly connect.

Royalties Function

Allows NFT artists/producers/developers to have automated royalties fee share.

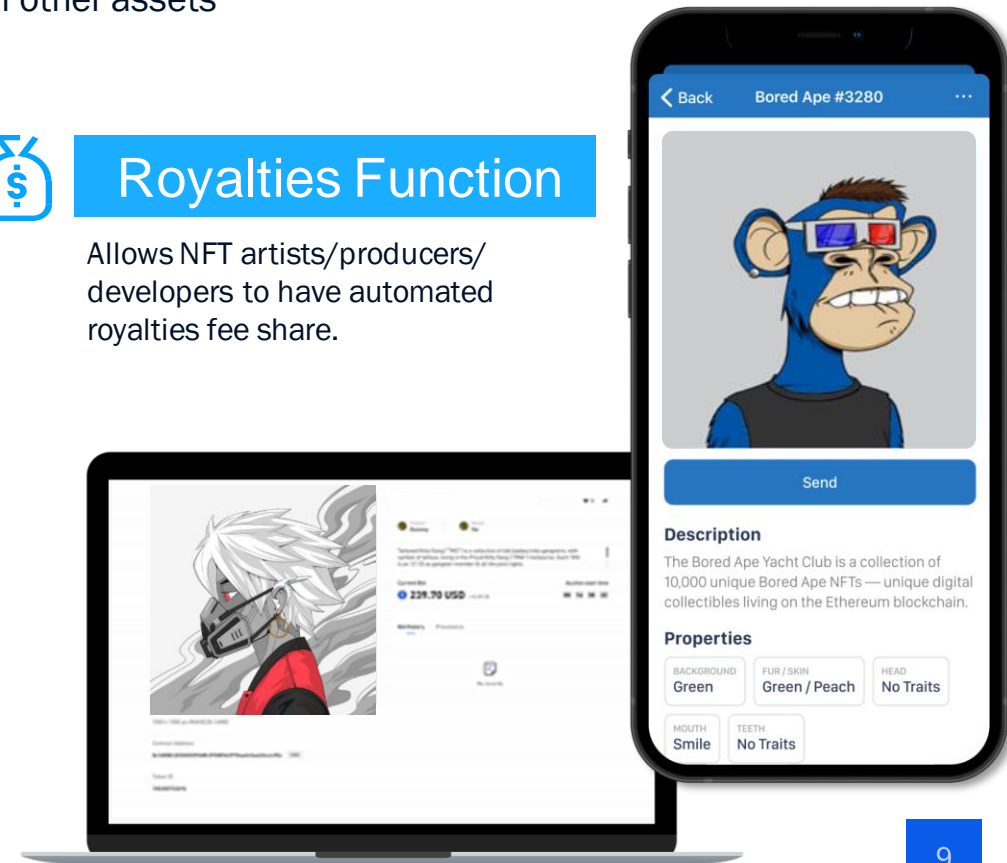

Auction & Sale

Auction or “Buy it Now” mechanisms for fixed pricing or bidding.

NFT Ranking

The NFT ranking system draws insights from our big data algorithms and calculates relevant ranking statistics including NFT prices, transaction volume, market trends, and user preferences.

Digital Assets Custody

Complete Custody Solutions

Comprehensive API, one-time connection to gain access to 200+ tokens.

Customized Mainchain Integration

Complete customized integration and optimization of in-demand/popular main chains.

Super Node Service

Seamlessly connect to 200+ mainchain networks, save up to 50% of development costs.

Portfolio Management System

Exclusive for business owners to improve operational efficiency and automation of accounting and performance reports.

Financial Derivative Products

Full suite of financial products such as lending or wealth management to maximize the utilization rate of funds.

Wallet

We help you build centralized or decentralized wallets, cloud wallets, and local wallets with 20+ compatibility modules and over 200 different functions to provide your customers with the most secure and user-friendly applications.

ChainUp Cloud - Web 3.0

ChainUp Cloud is an **all-in-one Web3 platform** that provides stakeholders and entrants in the space a one-stop solution to accelerate development and serve changing client needs. We provide a range of Web3 services such as API services for developers, Defi products for users and node services for everyone. Developers can focus on building without worrying about node maintenance and security.

Blockchain API

Instant, scalable API access with integrated data analytics for developers.

Multi-Chain Data

Access data with single API that handles millions of requests per second across multiple chains.

Nodes Services

Easily deploy industrial grade nodes for both staking & DApps services.

Validator or Full Node

Gain easy access to contribute to protocol consensus and obtain PoS staking benefits or deploy a full node to serve your DApp needs.

Staking

Stake and earn yields across all blockchains for Defi users.

24/7 Support

Dedicated account management, access to on-site engineering & protocol operation teams and 24/7 monitoring.

Distributed Storage

Guaranteed security, speed, and scalability in just a few clicks

Web3 Storage

Easy-to-use filecoin cloud mining, and a suite of tools and infrastructure to build decentralized applications on the filecoin network

ZKP mining

ZKP projects include Scroll, Aleo, taiko, Participate in early mining and earn great rewards

Compliance Fund

compliance fund for fil and BTC cloud mining, established in Hong Kong, Singapore

Why Choose Us

Experienced Team

Top ranked miner and storage provider on Filecoin network

Client-centric

Customizable to clients' needs

Operation and Maintenance

0% malicious incident rate

Secured Mining

Secured assets staked and protected hand-over process

Compliance

Compliance landing policy first

Technology Leadership Optimized for Efficiency

RISK & COMPLIANCE

We value risk management and security to the highest standards and ensure all of our products and services meet complete compliance requirements.

Client Security & Assurance

Security and Risk Control

- Strict KYC authentication, certification, and anti-money laundering strategy
- No-gaps information security protection system
- Top-of-the-line zero trust security practices
- Segregated account management systems for reliable fail-safes
- MPC technology provision for financial security
- Real-time business risk control system
- Real-time data analysis for security situational awareness
- Dedicated information security team

Managed Security Policy

- 100% risk control full coverage
- Comprehensive risk management
- 3-Layer financial reconciliation
- Real-time capital monitoring
- Intelligent monitoring of asset flow and abnormal behaviors
- 30+ defense mechanisms such as withdrawal blocking, DDoS Defense and traffic filtration

Transaction Monitoring

- User behavior data and analysis
- Multi-dimensional monitoring of users, administrators, assets, servers and other related components
- Process tagging to identify threats
- Active defense against high-risk behavior
- System attack analysis and active interception

Smart Contract & Code Audit

- Professional audit reports, third-party agency support
- Various verification technologies, automatic code scan security
- Frequent security testing projects for new risk evaluation, hacker defense, and ensuring smart contract security

Crime Prevention & Control

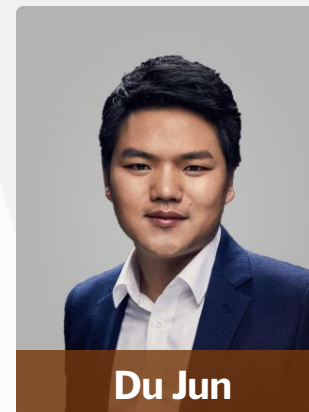

- High level operation permission isolation
- Multiple confirmation of high-risk operations
- Abnormal login audit
- Unauthorized operation flagging
- Server high-frequency access
- Administrator self-inspection system
